Sustainability is at the core of the University of Michigan’s Landscape Architecture program. Embedded within the interdisciplinary School for Environment and Sustainability (SEAS), this field of study offers the ideal context for training change-driven leaders in ecological design.

Here, you will learn to employ ecological principles authentically in environmentally responsible design — from the center of redeveloping cities to changing rural landscapes. Aesthetic theory, cultural engagement, ecological function, technical skill, and environmental justice all figure prominently in the program, which dynamically evolves in response to new knowledge in the environmental sciences.

Graduates of the Landscape Architecture program are known for their ability to synthesize information about ecological processes and systems, human behavior, cultural/political institutions, and urban patterns to create sustainable landscapes that work aesthetically, ecologically, socially, technically, and economically.

The world’s environmental challenges require innovative leaders capable of creative design-thinking and cross-disciplinary collaboration. Join us.
